11 The Finite Element Method - BYU ACME

11 The Finite Element Method Lab Objective: The Finite Element Method is commonly used for numerically solving partial differential equations. We introduce the finite element method via a simple BVP describing the steady state distribution of heat in a pipe as it flows through. Advection-diffusion of heat in a fluid we begin with the heat equation $\nabla \cdot (\kappa \nabla T) + \mathbf{v} \cdot \nabla T = Q$... Feb 16th, 2024

Meshing For The Finite Element Method

The name "Finite Element Method" is meant to suggest the technique we apply to all problems. That is, we look at the geometry, the shape of a region, and immediately imagine it broken down into smaller subregions. The idea is that we are going to use a simple approximation method, but the errors in this approximation method become small. Apr 2th, 2024
