Wastewater Treatment Process. That is, the microorganisms that carry out the treatment are attached to a solid medium, as in trickling filter or RBC systems. By contrast, in a suspended growth biological wastewater treatment process, like the activated sludge process, the microorganisms that carry out the treatment are kept in suspension.

Discrete Stochastic Processes, Chapter 2: Poisson Processes

The counting process $N(t)$ for each $t > 0$ are then defined as the number of arrivals in the interval $(0, t]$. $N(0)$ is defined to be 0.

Thus, for the Bernoulli process with an increment size of 1, $N(n)$ is a random variable denoted as S_n in Section 1.3.

Poisson Processes, and Compound (batch) Poisson Processes

Theorem 1.1 Suppose that ψ is a simple random point process that has both stationary and independent increments. Then in fact, ψ is a Poisson process. Thus the Poisson process is the only simple point process with stationary and independent increments.
